

`.first{` use so first elemnt in page is not flush with header}

[hero_select src="image.jpg" class="" product="for industry in app.js"]

The diagram illustrates a document layout. On the left, there is a rectangular box with a diagonal cross, representing a placeholder for an image. To the right of this box is a vertical stack of horizontal bars of varying lengths, representing lines of text. The bars are arranged in a way that suggests a list or a series of paragraphs. Below the diagram, there is a code snippet showing the HTML structure for the image and text.

```
[image_text src="image" caption="caption" title="header"]<p>text</p>[/image_text]
```

The diagram illustrates a sequence of images. On the left, there is a vertical stack of 10 horizontal bars of varying lengths, representing a sequence of images. On the right, there is a square with an 'X' inside, representing a final image or a placeholder for an image.

[intro_query title="header" product="for emails sent"]<p>content</p>[/intro_query]

```
[column_text title="header"]<p>content</p>[/column_text]
```
